TOP REASONS TERADICI PCOIP TECHNOLOGY OFFERS THE BEST USER EXPERIENCE

Superior Image Quality & Performance

- Low latency, low bandwidth, crisp image
- PCoIP applies the right compression needed based on file types (text, video and images)

Highest Security

- PCoIP transfers only encrypted pixels
- Teradici's encryption delivers the highest security required by governments (supports AES 256 and NSA Suite B cyphers)

Simplified Management, Rapid Deployment

- Shorter and less costly implementation cycle with fewer components and no WAN acceleration requirement
- PCoIP zero client end points perform better, last longer, with nothing to upgrade or manage locally
- With PCoIP management console, zero clients take just 5 minutes to install and view all your PCoIP components

amazonWorkSpaces

VMware Horizon Air

Enhance the PCoIP virtual desktop experience on these platforms by deploying LG Zero Clients.

"LG is committed to creating solutions that are both inventive and consistent with our family of quality products. By teaming with Teradici on the LG V series PCoIP cloud box and monitor solutions, we're delivering a full PC experience over standard IP networks for remote desktop use, with high-fidelity graphics and USB connectivity. Cost-effective, compact and easy-to-use, our portfolio takes full advantage of PCoIP technology to give consumers access to data and applications securely from the data center for an uncompromised, high-performance virtual computing experience."
