INSTALLATION NOTES

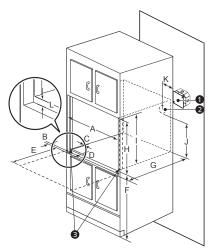

- The cabinet base platform must be able to support 190 lbs (86 kg). If the cabinet
 does not have a solid bottom, two braces or runners must be installed level with
 the bottom of the cutout to support the weight of the oven. Make sure the base
 is level and the front of the cabinet is square. If the cabinet base is not level, the
 oven racks will tend to slide out when opening the door.
- Make sure the cabinets and wall coverings around the oven can withstand the temperature (up to 194° (90°)) generated by the oven. Discoloration, delamination or melting may occur.
- Kitchen cabinets in contact with the oven must be heat resistant up to 194°F (90°C), and fronts of nearby units up to at least 158°F (70°C).
- DO NOT remove spacers (3) on the side walls of the built-in oven. These spacers center the oven in the space provided. The oven must be centered to prevent excess heat buildup that may result in heat damage or fire.
- DO NOT put any weight on the oven door. Never allow anyone to climb, sit, stand
 or hang on the oven door. The oven could be tipped and injury might result from
 contact with hot food or the oven itself.
- DO NOT block the oven air exhaust located at the bottom of the oven. Blocking the exhaust may cause cabinet damage and product malfunction.

NOTE

- If marks, blemishes or the cutout opening are visible above the installed appliance, it may be necessary to add wood shims under the runners and front trim until the marks or opening are covered.
- If the cabinet does not have a front frame and the sides are less than 3/4" (1.9 cm) thick, shim both sides equally to establish the cutout width.
- The junction box (1) must be flush with the conduit opening (2) of the cabinet as shown.
- Allow at least a 23" clearance for the door depth when it is open.
- Do not remove the gliding racks from the base packing. Gliding racks are attached separately to the top and bottom of the oven.

UNDERCOUNTER INSTALLATION (STANDARD)

INSTALLATION NOTES / DIMENSIONS / CLEARANCES

- 1 Gas or electric cooktops may be installed over this oven. See cooktop installation instructions for cutout size. See label on top of oven for approved cooktop models.
- 2 240 V / 208 V junction box location (Junction box may be in adjacent cabinet.)
- 3 Gas and electrical connections for 30" (76.2 cm) gas cooktop must be located in an adjacent accessible location to the right. For a 36" (91.4 cm) gas cooktop, the connections may be made to the left.
- 4 Top and/or side fillers may be necessary if unit is positioned between existing cabinets. Be sure they are attached securely, because they will anchor the oven in the cabinets.
- 5 29 1/8" (74.0 cm) min. 29 3/₁₆" (74.1 cm) max.
